

Examination: Research Poster

Deadline: 30.09.2026 (end of the day, central European time)

Group size: 1-2 participants (parallel group internal)

Summary: The poster must be based on empirical work related to a topic covered in the lecture, seminar, or exercise component of the NLP module. It may extend your seminar presentation, but this is not mandatory. There is no oral presentation. You must submit your poster digitally via STUD.IP, together with a mandatory appendix. The following guidelines define all requirements. Read them carefully.

Poster

The poster is the core submission. It must present empirical work in the field of NLP, structured into the following three mandatory sections.

Hypothesis: State your research questions clearly. Situate your work within the broader research context, explaining what prior work exists and where your contribution fits.

Methodology: Describe and justify the methods you employed, including the datasets, models, and algorithms selected for your task. If your research involves technical implementations, you must provide a link to an external repository (e.g. GitLab or GitHub) that allows us to reproduce your experiments.

Results: Present your results using tabular and/or graphical representations. Discuss your findings with respect to your original hypothesis, including any limitations or unexpected outcomes.

In addition, your poster must meet the following technical requirements:

- **Format:** DIN A1 (594 × 841 mm), portrait or landscape orientation
- **Text:** Readable in terms of color (sufficient contrast to background objects) and large enough font size for a poster (paragraph should be at least 24 pt)
- **Figures:** Readable in terms of resolution (pixel images should have at least 150 PPI)

⚠ While the scientific content is our main grading criteria, we will also assess design and layout aspects including readability, spacing and visual concept (does the design help to strengthen your argument/content, or is it meaningless decoration?).

Appendix

The appendix is a separate, mandatory PDF document accompanying your poster. It must include the following two components.

References: Provide a complete list of all sources consulted. References must primarily be academic papers. A collection consisting solely of website links does not qualify as a valid reference list. Non-academic sources are valid references in specific cases, including but not limited to: dataset

documentation or data papers, language model technical reports or model cards, news articles relevant to your topic, official software or tool documentation.

Declaration of Academic Integrity: You must include a signed copy of the official university declaration of academic integrity. The form is available for download from the University of Trier website. Read the declaration carefully, as it regulates the permissible use of AI tools for examination purposes. [Download declaration \(PDF\)](#).

Submission

Upload a single ZIP archive to the `posters` folder on STUD.IP within your seminar group. The archive must contain exactly two PDF files: the poster and the appendix. The ZIP file must be named according to the following convention, using your student ID(s). No deviations are accepted: `{student_id}.zip` or `{student_id_1}_{student_id_2}.zip` (Example: `255678.zip` or `255678_123445.zip`). The submission folder automatically closes after the deadline. We do not accept late submissions.

Submissions failing the above defined requirements are automatically graded with 5.0. Thus failing the examination. This directive is binding and we will not deviate from or discuss these guidelines.
